

# How to Setup the Echo Machine ?

---

Jens-Uwe Voigt  
Dpt. of Cardiology  
Cath. University Leuven  
Belgium

## The Beginning ...

---

**Inge Edler and  
Hellmuth Hertz**

**Echo Machine  
from 1954**

(photo taken in 1977)

JU Voigt, University Leuven

## **Increasing Number of Buttons**

---

# **How to handle them?**

JU Voigt, University Leuven

## **Principles**

---

### **1.) Make yourself comfortable !**

**Dim the light in the room.**

**Find your preferred scanning position.**

**Adjust the monitor.**

JU Voigt, University Leuven

## Monitor Adjustment

brightness / contrast

use all the  
brightness  
range  
the monitor  
can display

JU Voigt, University Leuven

## Monitor Adjustment

brightness / contrast

JU Voigt, University Leuven

## Monitor Adjustment

---

brightness / contrast

JU Voigt, University Leuven

## Principles

---

2.) At best, you can see what is there.

Presets

Power, Gain

TGC

JU Voigt, University Leuven

## Presets

### wrong preset

too flat  
(compression)

too smooth  
(persistence)

abdominal  
preset

JU Voigt, University Leuven

## Presets

### right preset

right contrast  
setting

no temporal  
smoothing

cardiac  
preset

JU Voigt, University Leuven

## Signal Pathway

JU Voigt, University Leuven

## Signal Pathway

### output power

output energy

given in [dB]

highest:  
0.0 dB

50% reduction:  
-3.0 dB

JU Voigt, University Leuven

## Signal Pathway

### gain control

amplification  
of the  
receive signal

„brightness“

biggest button  
on the panel

JU Voigt, University Leuven

## Signal Pathway

### gain control

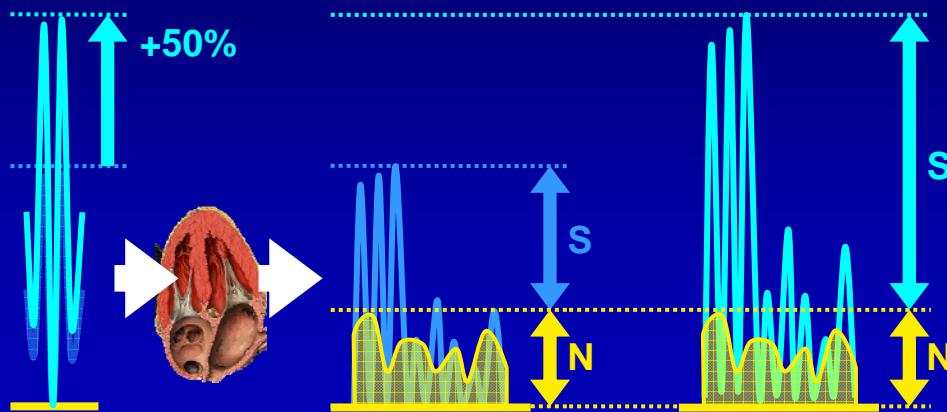

... does not improve signal to noise ratio !

JU Voigt, University Leuven

## Signal Pathway

... power increase will.

JU Voigt, University Leuven

## Power and Gain Effects

JU Voigt, University Leuven

## Signal Pathway

---

**time gain compensation**

depth dependent  
gain control

JU Voigt, University Leuven

## Signal Pathway

---

**time gain compensation**

depth dependent  
gain control

JU Voigt, University Leuven

## Image Optimization

---

automated adjustments

JU Voigt, University Leuven

## Principles

---

**3.) Nothing in life is for free.**

**Spatial vs. temporal resolution:**

**Ultrasound Frequency**

**Harmonic Imaging**

**Focus**

**Depth / Sector Width / Frame Rate**

JU Voigt, University Leuven

## Spatial and Temporal Resolution

depth dependence

lateral resolution

less depth - more beams

frequency dependence

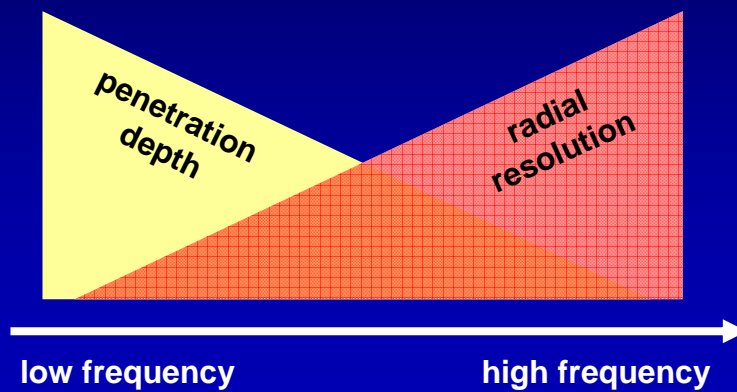

radial resolution

higher frequency - shorter pulses

JU Voigt, University Leuven

## Radial Resolution

ultrasound frequency

JU Voigt, University Leuven

## Radial Resolution

### ultrasound frequency

low frequency

good  
penetration:

obese patients  
deep structures

JU Voigt, University Leuven

## Radial Resolution

### ultrasound frequency

high frequency

high  
resolution

normal patients  
children  
apical structures

JU Voigt, University Leuven

## Resolution

focal zone

JU Voigt, University Leuven

## Resolution

focal zone

focus = 12 cm  
apex blurred

JU Voigt, University Leuven

## Resolution

### focal zone

focus = 3 cm  
apex sharp  
basal image  
sub-optimal

JU Voigt, University Leuven

## Resolution

### focal zone

JU Voigt, University Leuven

## Resolution

### focal zone

dual focus:

$\text{focus}_1 = 4 \text{ cm}$

$\text{focus}_2 = 10 \text{ cm}$

trade-off:

frame rate

(78 fps vs. 37 fps)

JU Voigt, University Leuven

## Principles

### 4.) Doppler Ultrasound.

Spectral Doppler (PW, CW).

Colour Doppler

JU Voigt, University Leuven

## Spectral - Doppler

spectrum display: gain settings

JU Voigt, University Leuven

## Spectral - Doppler

spectrum display: time scale

peak only  
measurements

time dependent  
measurements

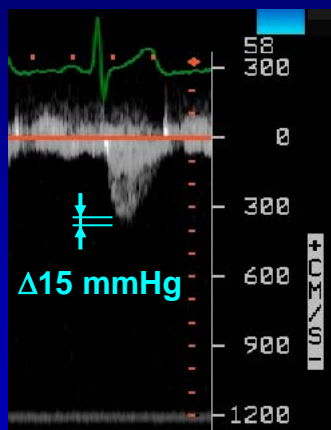

JU Voigt, University Leuven

## Spectral - Doppler

spectrum display: velocity range

JU Voigt, University Leuven

## Spectral - Doppler

pulsed wave Doppler: velocity range

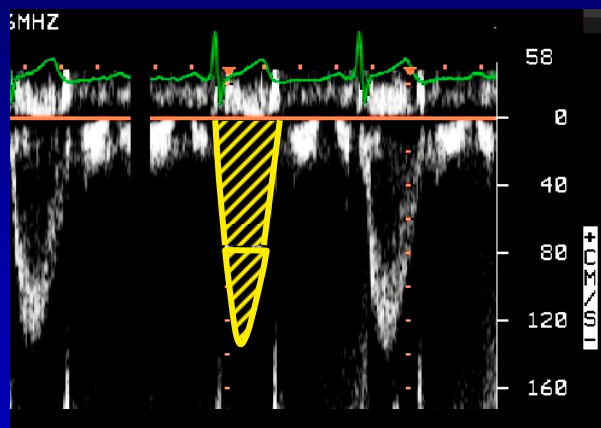

limited  
velocity range  
or  
limited depth

aliasing

JU Voigt, University Leuven

## Spectral - Doppler

### pulsed wave Doppler: velocity range

adjust:  
base line  
velocity range  
(PRF)

JU Voigt, University Leuven

## Spectral - Doppler

### pulsed wave Doppler: high PRF mode

HPRF - mode

advantage:  
higher velocities

drawback:  
multiple  
sample volumes

JU Voigt, University Leuven

## Colour - Doppler

---

colour box size

JU Voigt, University Leuven

## Colour - Doppler

---

gain setting

JU Voigt, University Leuven

## Colour - Doppler

---

velocity range (PRF)

JU Voigt, University Leuven

## Principles

---

**5.) In case of problems,  
don't call the technical service.  
First of all, think !**

**Requirements:**

**Know what you want to see.  
Know something about ultrasound.  
Recognize what's wrong.**

JU Voigt, University Leuven
